COMPACT 28 LITRE WATER BATH

225999

PRODUCT SPECIFICATION

COMPACT 28 LITRE WATER BATH

225999

The new SousVideTools 28 litre Compact Water Baths comes with a new touch screen. It has a bright blue display that can be seen across the kitchen. These water baths are designed for extensive use in any professional kitchen, complete with a 2 year warranty to match. Accuracy of 0.1°C. Included as standard are 6 move-able stainless steel partitions.

STANDARD SPECIFICATION

28 litre capacity with 6 moveable stainless steel partitions

POWER SUPPLY

UK 3 pin plug or Schuko plug for Europe

WARRANTY

2 year warranty

The new SousVideTools 28 litre Compact Water Bath come with a bright blue touch screen. This allows for the display to be read easily during the cooking process, even when stood on the other side of the kitchen and makes operation incredibly easy. Accuracy and consistency is guaranteed through the PID controller, that controls the temperature to within 0.1°C, meaning perfectly cooked food time after time.

Food can be separated easily via the 6 moveable stainless steel partitions. This allows the working area of the bath to be divided for portion control. They separate the food into different sections for easy identification when cooking. They can also separate products that have just been placed into the bath (and therefore not regenerated) from those 'on hold' ready to go.

The water baths have been designed so that the heater and temperature sensor are positioned under the inner tank to help optimise temperature control.

The water moves around the baths via natural convection. The removable lids minimises evaporation and helps to maintain the water baths temperature.

This model features a low water level protection, meaning should you or a colleague accidentally turn the water bath on empty or allow the water level to drop below the minimum required the water bath will shut off and sound an alarm ensuring the water bath remains undamaged.

The water baths are easy to use, offer energy efficiency and are simple to clean. They are fitted as standard with large LED's, optical and acoustic alarm signals for time and temperature and a stainless steel lid. SousVideTools water baths are quick and easy to set up. Simply select the desired temperature by operating the buttons on the 'positive feel' membrane control pad. A large illuminated digital display - readily visible from across the kitchen - gives you instant confirmation of the set temperature at all times within 0.1°C.

COMPACT 28 LITRE WATER BATH

225999

KEY FEATURES

- + Sleek all-in-one design
- + Precise temperature control to 0.1°C
- + Digital LED display to 0.1°C
