

Floor Polish Stripper

PUBLIC
AREA

2x5ltr

CF988

CONCENTRATE

Easily removes emulsion polish.

Use(s):

Effectively strips emulsion polishes from most floor surfaces, including sealed wood or cork.

Directions:

Dilute approximately 1 to 10 with water to achieve effective results.

It may be spread with a mop or machine equipped with a tank.

Leave in contact with the polish for between 5 - 15 minutes before machine scrubbing with a black stripping pad, never allow the stripper to dry as this will make polish harder to remove, divide the floor into areas where the whole process may be completed before the solution dries. Always rinse well and allow the floor to dry thoroughly before re-applying polish. A small amount of a mild acid such as vinegar may be added to the final rinse to neutralise the floor.

Technical:

Physical state:	Liquid
Colour:	Red (darkens with age)
Odour:	Characteristic
pH:	> 11.5
Density:	1.05 – 1.07

UFI: YQH5-5049-300W-DAJT
