

CL20 ICEMAKER

BEAUTIFULLY FORMED

CL20, the elegant compact mains connected icemaker produces 22kg of cubed ice per 24 hours with a generous 7kg insulated storage bin.

The exterior of the CL20 is constructed entirely from stainless steel, attractive, timeless and hygienic.

The small foot print of the CL20 allows for easy installation under counter, behind the bar or counter top.

The mains water and waste connections allow the machine to run 24 hours a day so that there is always ice available when required.

Intelligent electronic controls turn off production when the storage bin is full and automatically restart the machine when ice is removed.

Ice thickness adjustment can be done via the simple touch pad allowing the user to define the size of ice required.

A self cleaning cycle allows for easy maintenance for sanitary and hygienic operation and a built in air filter makes routine condenser cleaning easy.

The CL20 has a built in timer to allow you set the amount of time you would like the ice maker to run for, a feature which is perfect for smaller venues who only operate at select times, making sure the ice maker is only in use when it needs to be, saving energy.

22kg production per 24 hours
7kg insulated storage bin

Space saving design perfect
for under counter installation

Mains connected to water &
waste for constant ice supply

Self cleaning cycle for sanitary
hygienic operation

Intelligent electronic controller
with built in timer and alarms

Energy efficient eco-friendly design
using R600a hydrocarbon refrigerant

Model	Width	Depth	Height	Production	Storage
