

Kebab Grills

GR40E

This powerful grill enables you to adjust the heat on to the meat as the whole element assembly slides front to back and can be locked off in any position. The spit remains fixed so there is no possibility of the meat falling. You can also adjust the heat as each element has a half / full power setting.

The motor is fully protected underneath the spit assembly. The base plate is hermetically sealed so the motor is protected from infiltration by fat or juice from the meat. Mounted on ball bearings, the motor does not bear the weight of the meat nor can it be knocked when the spit is loaded.

Features: 3 elements across two heating zones with independent control, firestone panel. Front access drip tray

Optional accessories: drainer tray; 3 sided splash guard; side heat deflectors;

model shown with BG2 shashlick accessory

Weight	27kg
